What is the best way of representing a DateTime in Excel? We use Syncfusions Essential XlsIO to output values to an Excel document which works great. But I can't figure out how

Now Excel will calculate regressions using both x 1 and x 2 at the same time: How to actually do it The impossibly tricky part there's no obvious way to see the other regression values. In

i'm automating excel, using the macro system as a guide to what i should do through automation. When i format a column as a date, the macro generated a NumberFormat for the column to be: [\$-409]m/...

I need to parse an ISO8601 date/time format with an included timezone (from an external source) in Excel/VBA, to a normal Excel Date. As far as I can tell, Excel XP (which is what we're using) does...
