At PNNL, we connect cutting-edge fundamental scientists with end-use domain experts to discover and develop new energy storage technologies for grid and transportation.

Utilizing state-of-the-art capabilities and world-class expertise, we focus on making energy storage cost effective through R& D innovations of both new and existing battery technologies.

Discover how UC San Diego's Energy Storage Group is driving the future of renewable energy with cutting-edge research in battery storage, microgrids, and carbon removal.

As one of the leading Battery Energy Storage Systems (BESS) suppliers in China, we proudly present our unparalleled expertise in the design of energy storage containers, a testament to the exceptional

Argonne works with existing and start-up businesses to license our patented battery technologies and to develop, analyze, test, and license new and emerging energy storage technologies.

Form Energy is an American company driving innovation in energy technology and manufacturing. Our cost-effective, multi-day energy storage solutions are designed to ensure a

Researchers from across Berkeley Lab work together to develop scientific and technical solutions to energy storage challenges in materials, manufacturing, and systems design.

NLR's multidisciplinary research, development, demonstration, and deployment drives technological innovation and commercialization of integrated energy conversion and storage

Our work supports the expansion of AI infrastructure, the decarbonization of power systems, and the

# New Energy Storage Manufacturer Laboratory

resilience of communities facing increasing grid instability. We deliver what the future demands:

American Battery Factory (AFB) has secured offtake agreements for 4.5GWh of its initial 5.5GWh US factory output. The industry's premier celebration of excellence, innovation and hard work returns this
