Solar PV will account for around 80% of the global increase in renewable power capacity over the next five years ? driven by low costs and faster permitting timeframes ? followed by

Photovoltaics is a method of generating electric power by using solar cells to convert energy from the sun into electricity. These cells are assembled into solar panels and then

A new IEEE report shows solar dominated new generation in 2024, with 70% of added global capacity from PV and record installations in China and the United States.

Solar accounted for 81% of all new renewable energy capacity added worldwide. While remaining a modest contributor to overall electricity generation for now, solar"s share rose to

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity

Renewable power made up almost 50% of the world"s electricity capacity last year after a record ?increase in solar installations, data from the International Renewable Energy Agency shared ...

On Wednesday, the International Renewable Energy Agency (IRENA) released its numbers on what was built in 2025. And much as we saw in the US, solar power is the primary driver

China"s solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country"s grid and climate trajectory.

Find up-to-date statistics and facts on the global solar photovoltaic industry.

In 2024, between 554 GWdc and 602 GWdc of PV were added globally, bringing the cumulative

New solar power generation production

installed capacity to 2.2 TWdc. China continued to dominate the global market,
